

▶ Access Innovations, Inc: ThesaurusMaster™

Access Innovations, Inc. has a suite of content creation entity extraction and taxonomy/thesaurus management software which puts you in control of your data. Use ThesaurusMaster™ to manage your structured taxonomies. Add M.A.I.™ (Machine Aided Indexer) with its robust natural language processing layer and use a rule-based interactive system for term and other metadata assignment to individual documents. For indexing that must be 100% accurate, editors are assisted in selecting indexing terms but retain control of the final selections. For large volumes of data, M.A.I. can also be used to auto-categorize up to 92% accuracy.

To further simplify the creation and management of content management and enhance searchability, add Metadata Extractor, Entity Extractor with novelty detection, XML Intranet System (XIS™) and Automatic Summarization modules.
